

With extensive experience in delivering all types of gas metering systems, Pars-Technic can engineer and deliver the right solution for your needs

The systems Pars-Technic have provided to the gas industry range from single stream skids to complex, fully integrated multi-stream gas metering solutions, and from 2" orifice plates to 48" ultrasonic meters.

Whether ultrasonic meters for reduced uncertainty, high turndown, wide range of capacity and low maintenance; orifice meters for simple, proven designs at a relatively low cost; turbine meters for low cost, accurate and repeatable designs; Venturi meters for low pressure loss, low maintenance and proven technology suitable for wet gas; or Coriolis meters for direct mass flow measurements that are accurate and reliable – Pars-Technic have the knowledge, experience and technical ability to deliver the right solution for your needs.

As an independent company, our engineering experts identify, design and integrate the most appropriate technology for your requirements, whilst also

working to minimize your total cost of acquisition –meeting both your operational and commercial needs. And as with every solution, we always deliver the quality, reliability and support you would expect from Pars Technic Co.
