

Pressure Vessels

Pressure vessels are one of our main products with different diameters, lengths, and thicknesses. Towers, columns, reactors, knock out drums and other pressure retaining equipments are types of pressure vessels which are used in oil, gas, petrochemical, and other industries.

We are capable of fabricating pressure vessels with different materials such as carbon steel and stainless steel according to ASME Sec. VIII, and other international codes and standard.

Having heavy plate forming facilities, Pars Technic is one of the leading manufacturers of high pressure vessels in Iran.
